Radial structure of the H-S integrand on the affine saddle contour (8 random directions)
$-\frac{1}{2}\mathrm{Re}\,\Delta E^2$ (log |integrand|)
radius r in steepest-descent frame units
JAM dy e_config (n_hs=12)
JAM synthetic_z_plumbing c_config (n_hs=1)
NNPDF both e_config (n_hs=12)
Gaussian $-r^2/2$
mean $|\frac{1}{2}\mathrm{Im}\,\Delta E^2|$ (phase)
radius r in steepest-descent frame units
shaded: 95% of Laplace-proposal draw radii
log radial mass $(n-1)\log r - \frac{1}{2}\mathrm{Re}\,\Delta E^2$ (max = 0)
radius r in steepest-descent frame units
